JUL 17 2007

Attn: Lorena Solórzano-Vincent

Subj: Informal Consultation for Federal Emergency Management Agency Proposed Sewer Repairs for Rubidoux Community Services District (FEMA-1577-DR-CA, PW #1473), Riverside County, California

Dear Mr. Amaglio:

This letter acknowledges our receipt of your letter dated April 2, 2007, requesting our concurrence with your determination that the installation of the Juan Diaz lift station, Regional Lift station, and several sewage lines may affect but is not likely to adversely affect the federally endangered southwestern willow flycatcher (*Empidonax traillii extimus*; "SWF") or the federally endangered least Bell's vireo (*Vireo bellii pusillus*; "LBV") and its designated critical habitat. Our comments below are based on the information provided in your letter, a Draft Mitigated Negative Declaration for Regional Wastewater Facilities Replacement Project (February 2007), and other information received pertaining to this project. A complete project file is maintained at the Carlsbad Fish and Wildlife Office (CFWO).

The subject project is located in sections 20 and 29, (Township 2 South, Range 5 West) in Riverside County, California, approximately 2 miles west of the City of Riverside. The action area is northwest of the Santa Ana River and west of the Sunnyslope Channel, on the grounds of the existing Louis Robidoux Nature Center. This area is under the jurisdiction of Riverside County Park and Open-Space District. The Federal Emergency Management Agency proposes to construct permanent regional wastewater conveyance facilities to replace temporary facilities that were installed after damages from a flood in 2005. Based on the detailed project description in the documents provided and correspondence with Lorena Solórzano-Vincent of your office, we understand that all LBV and SWF habitat will be avoided, all construction activities will occur at least 200 feet from riparian habitat, and construction activities will avoid the LBV and SWF nesting season. Given that the aforementioned measures have been incorporated into the proposed action, we believe the potential direct and indirect impacts will be avoided or are

TAKE PRIDE[®]
IN AMERICA 

discountable; therefore, we concur that the project is not likely to adversely affect SWF or LBV and its designated critical habitat.

This completes our informal consultation, however, obligations under section 7 of the Endangered Species Act, as amended, should be reconsidered if: 1) you are unable to implement all agreed upon and recommended avoidance and conservation measures; 2) new information reveals effects of the agency action that may affect listed species or critical habitat in a manner or to an extent not previously considered; 3) this action is subsequently modified in a manner that was not considered; or 4) a new species is listed or critical habitat designated that may be affected by the action.

If you have any questions regarding this letter, please contact Kathleen Pollett of this office at (760) 431-9440, extension 357.

Sincerely,

A handwritten signature in cursive script, appearing to read "Karen A. Goebel".

Re: Section 106 for Rubidoux Community Services District Utility Repair- Sewer Main Project, FEMA-1577-DR-CA, PA ID 065-14C04-00, Riverside, Riverside County, CA

Dear Mr. Amaglio:

Thank you for initiating consultation with me pursuant to the *2005 First Amended Programmatic Agreement Among the Federal Emergency Management Agency, The California State Historic Preservation Officer, The California Governor's Office of Emergency Services, and the Advisory Council on Historic Preservation*. FEMA is requesting I concur with the determination of no historic properties affected.

FEMA is funding the construction of a permanent regional wastewater conveyance facility in the Rubidoux Community Services District. The undertaking consists of the demolition and removal of the existing temporary facilities and construction of a new regional lift station, force mains, gravity sewers and 4-inch water pipeline.

FEMA has determined the APE for the undertaking consists of the three lift stations; 14" and 18" force mains, a 2" force main; 24", 12" and 6" gravity sewers; an access road to the Regional Lift Station; and an 8" water pipeline (located within the access road). I find this sufficient.

FEMA has identified one historic-era property within the APE, the Jurupa Ditch and for purposes of this undertaking has assumed that the site is eligible for inclusion in the National Register of Historic Places.

In accordance with Stipulation VII of the PA, FEMA had determined that "No Historic Properties Affected," however, I feel a "No Adverse Effect" is more appropriate for this undertaking, considering there is an historic property within the APE for the undertaking.

Thank you again for considering historic properties in your planning process. If you have any questions or concerns, please contact Amanda Blosser of my staff at (916) 653-9010 or at ablosser@parks.ca.gov.

Sincerely,

A handwritten signature in cursive script that reads "Susan K. Shattler for".
